

Mineral Sponge™

A NATURAL ABSORBENT FOR USE WITH PETROLEUM
AND CHEMICAL SPILLS OF LIQUID AND VAPOUR

- Fast Acting
- Super Absorbent
- De-Dusted
- 100% Natural
- Workplace & Ecology Safe

What is Mineral Sponge™?

Mineral Sponge™ is a unique, non-toxic mineral that has a large internal surface area. This enables it to absorb large quantities of gases and liquids.

Mineral Sponge™ is a carefully selected particle size of a natural mineral, designed to absorb:

- liquid chemicals
- vapours and odours
- petroleum products

How To Use Mineral Sponge™

Apply liberally over spill and wait until petroleum/chemical is completely absorbed. Sweep up and dispose of according to hazardous goods recommendation.

Oil/Fuel/Chemical Spills

Spread Mineral Sponge™ around the outside of the spill to form a barrier to stop the spill from spreading. Then sprinkle Mineral Sponge™ generously over the spill. Allow to absorb. To hasten the absorbing process broom the Mineral Sponge™ into the spill. **NOTE:** The used Mineral Sponge™ should be disposed of as recommended by your local authority.

Packaging

20kg, 10kg and 2.5kg polyethylene bags.
